

Ca'rerra

Ca'rerra is an original agent for effective soil-liming and improving its properties

It has a unique combination of organic compounds: Calcium Oxide CaO, Calcium Hydroxide Ca(OH₂) and Calcium Carbonate CaCO₃

Product approved for the Polish market by Polish Ministry of Agriculture and Rural Development permit certificate no.G-919/20

Ca'rerra is a modern and innovative soil enrichment agent designed to raise soil pH index and fertilize at the same time. It consists of three forms of calcium (oxide, hydroxide and carbonate). This allows the rapid release of Ca ++ and CO₃ - ions into the soil. It acts faster than any other calcium agent while also having a longer duration effect.

The organic substance in Ca'rerra is sourced from residues of the fruit and vegetable processing industry including citrus fruit. Our unique technology guarantees that the effects of Ca'rerra cannot be compared with other organic soil enriching products found on the market eg. straw, manure or compost. Derived from fruit and vegetable waste, Ca'rerra contains more biologically active compounds and carbohydrates which are an excellent source of easily digestible carbon. These gently stimulate the growth of plant root systems and activate soil microorganisms. As a result, Ca'rerra restores soil's natural cluster structure, enhances water absorption and protects against degradation.

Ca'rerra is free from animal origin ingredients!

Application/Crop	Dose (t/ha)*	application date
winter cereals	0,6-1,2	Before sowing or planting, top dressing possible in early cultivation stages
winter oilseed rape	1,0-1,5	
maize	1,0-1,5	
sugar beet	1,0-1,5	
potatoes	0,6-1,0	
bean family	0,3-1,5	

component	content % as per distribution permit	as per lab tests no. NO/401/1/2019
CO	not less than 10% (m/m)	22,71(m/m)
organic substances	not less than 30% (s.m)	35,59(% s.m.)
N (Nitrogen)	C 22,71 co najmniej 0,2% (m/m)	0,26(m/m)
pH index in H ₂ O		12,6

Packing: Wholesale: BB 600 kg or 1000 kg.
Retail; buckets 6.50 kg
